

Fuel Tank Safety Caps

For installation in fuel tank openings of gasoline or diesel-powered industrial trucks and equipment.

Safety

Handle facilitates the release of the compression spring, and a padlock opening allows for lockability

Tight seal

Compression spring ensures a positive tight seal

Even tension distribution

Ball and socket joint assures even distribution of spring tension

Cap construction

Cap is made of die-cast aluminum or cast brass

Arrester screen

Replaceable arrester screen, made from perforated plated steel

Vacuum relief

Resealing vacuum breaker provides vacuum relief

Pressure relief

Spring-loaded cap automatically relieves pressure build-up within the tank

Easy opening

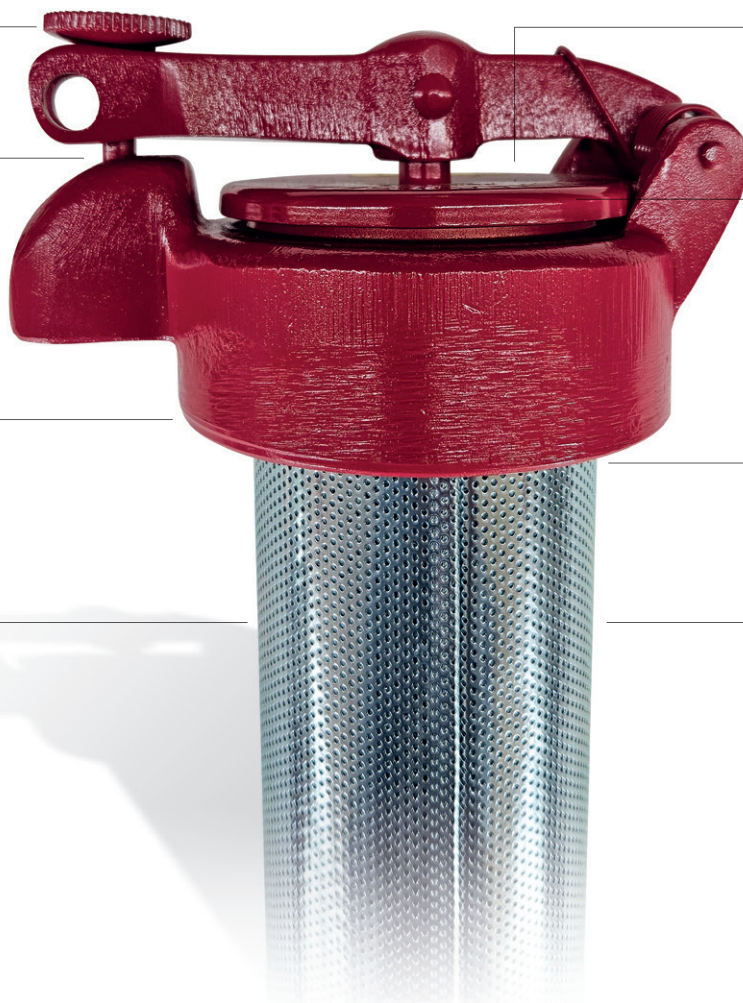

Self-closing cap is hinged for easy opening

Connection options

Available with male threads, female threads, or quarter-turn easy-on flange connections

Flame quenching

Flash arrester design quenches flame and prevents ignition of tank contents

PLUS:

Available in red for gasoline storage or green for diesel storage
